Free and open-source software (FOSS) is software that can be classified as both free software and open-source software. That is, anyone is freely licensed to use, copy, study, and change the software in any way, and the source code is openly shared so that people are encouraged to voluntarily improve the design of the software. This is in contrast to proprietary software, where the software is ...

A Geant4 application is defined by the use of an instance of the G4RunManager class or of a user-defined class derived from it. This class defines the main interaction with the user: it provides interfaces to define the user initializations (e.g. geometry and physics definitions) and the user actions that permit interaction with the simulation kernel and retrieve output information.

Is this good formal testing? It's certainly a formal procedure to follow, but where's the testing part? The closest thing is that little molecule of actual testing in the last line: the tester is instructed to apply an oracle by comparing the power setting on the Control Box with what the Zapper reports on its display.
